## **Team-ID-592870**

## <u>Team Members : Ashlin Binshu ,</u> <u>Dipanshu Mandal , Arnab Ghosh</u>

## **Table-1: Compenents & Technologies**

S.No	Component	Description	Technology
1.	User Interface	Flask-powered web	ReactJS , Tailwind
		interface	<ul><li>Frontend</li></ul>
		application.	Python (Flask) -
			Backend
2.	Application Logic -	Input data retrieval	ReactJS -> Python
	1	logic	(Flask Server)
3.	Application Logic –	Forward data to	Python
	2	machine learning	
	A 11 41 1 1	model logic.	5.4
4.	Application Logic –	Utilize a relevant	Python
	3	machine learning	
		model to predict	
		the desired	
	Application Lagic	outcome.	Di de a a
5.	Application Logic - 4	Retrieve data from the machine	Python
	4	learning model	
		logic.	
6.	Application Logic -	Code to serve	Python
0.	5	output data to the	i yulon
		user using internal	
		API	
7.	Database	Data used for	MS Excel (CSV
		prediction	format)
8.	Machine Learning	A supervised	Python , Jupyter
	Model	machine learning	Notebook
		model for	
		predicting the car	
		purchase	
9.	Server	Web Hosting	Vercel

**Table-2: Application Characteristics** 

S.No	Component	Description	Technology
1.	Machine Learning	Used for creating	Python Libraries
		the prediction	like Sklearn
		model	
2.	Data Pre-	Used for EDA and	Python Libraries
	processing Tools	data preprocessing	like
			Like numpy ,
			pandas , matplotlib
			, seaborn
3.	User Interface	A user-friendly UI	ReactJS , Tailwind
			<ul><li>Frontend</li></ul>
			Python (Flask) -
			Backend
4.	Availability	Ease for the user to	Web hosting
		access the web	platforms like
		арр	vercel are used to
			host the app which
			contains its own
			load balancing
			feature
5.	Scalability	Deploying the	Web hosting
		application on	platforms like
		cloud infrastructure	vercel are used
		for scalability and	
		perfromance
